

The Reno Record — Complete Agent System Brief

Version: July 9, 2026

Purpose: Full-context briefing for any AI agent operating on, extending, or analyzing this system. Read this before touching anything.

1. What This Is

The Reno Record is a public legal accountability archive documenting *State v. Cameron Doyle Church*, CR23-0657, Second Judicial District Court, Washoe County, Nevada. It is simultaneously:

1. A **public-facing website** at `therenorecord.manus.space` — a narrative archive for journalists, attorneys, advocates, and the general public
2. A **legal document management system** — ingestion, classification, versioning, violation tagging, predicate analysis
3. A **civil rights accountability tool** — pattern analysis, actor tracking, judicial comparison, missing predicate detection
4. A **personal legal defense infrastructure** — built and operated by the defendant, Cameron Doyle Church, who is representing himself pro se

The operator (Cameron) is the subject of the case. He built this system while under a no-bail bench warrant, then while in custody, then while the case was stayed. Every feature has a real-world legal consequence. Nothing here is hypothetical.

2. The Case — Factual Foundation

Core Case Identifiers

Field	Value
Case number	CR23-0657
Court	Second Judicial District Court, Dept. 8, Washoe County, NV
Judge	Barry L. Breslow
Prosecutor	Aziz Merchant (DA); Amos Stege (Chief DDA, intervened Sept 2025)
Defendant	Cameron Doyle Church
Federal civil case	Church v. Breslow et al., 3:24-cv-00579-ART-CSD (D. Nev.)
Arrest date	March 11, 2023
Days pending (as of July 9, 2026)	~1,216 days
Trial held	No

Charges

Count	Statute	Degree	Offense Date
Grand Larceny of Motor Vehicle	NRS 205.228(2) (a)	Category C Felony	March 10, 2023
Unlawful Taking of Motor Vehicle	NRS 205.2715	Gross Misdemeanor	March 9, 2023

The Factual Dispute

On March 10, 2023, Cameron Church moved a motorcycle from a shared residence. The registered owner, Brandon Pearson, filed a theft report. Church’s position — documented in the

State’s own probable-cause declaration on the night of the arrest — is that the motorcycle was held as collateral for unpaid rent owed by Pearson. The DA’s own April 2025 no-bail motion describes the case as: *“Cameron Church stole his roommate’s motorcycle over a rent dispute.”* The legal question of whether holding collateral for unpaid rent constitutes theft under NRS 205.228 has never been adjudicated. There has been no trial.

Counsel History (Chronological)

Attorney	Role	Period	Exit
Cooper Brinson	Alternate Public Defender	Mar 2023 – Jan 17, 2024	Substituted out; left APD entirely
Sydney McBride Hutt	Alternate Public Defender	Jan 17 – May 30, 2024	Declared conflict
Biray Dogan	Alternate Public Defender	Sep 2023 – Jun 2024	Substituted out
Galen D. Carrico	Conflict counsel	Jun 24, 2024 – May 8, 2025	Moved to withdraw
Samuel Figueroa	Private counsel (retained)	~Jun – Aug 2025	Sought withdrawal in writing to court and DA

No substantive motion on Church’s behalf appears in the docket from any of these attorneys.

Key Procedural Events (Chronological)

Date	Event	Source
Mar 11, 2023	Arrest; defense theory documented in State's probable-cause declaration	Probable cause declaration
Mar 12, 2023	Public defender appointed; pre-trial release	Court transaction log
Aug 18, 2023	Preliminary hearing canceled; amended complaint adds Count II; waiver of preliminary examination signed; bindover	Docket; complaints.pdf
Jan 17, 2024	Brinson substituted out	Docket
Apr 10, 2023	Richard Joyce stabs Church; Joyce charged in RCR2023-122783	Church filings
Apr 16, 2024	Trial date set (not held)	Docket

Date	Event	Source
Jun 22, 2026	Order Referring Disqualification Question	July 7 case summary
Jul 7, 2026	Most recent pro se filing	July 7 case summary

The Comparator: Richard Joyce

Joyce stabbed Church on April 10, 2023. Case RCR2023-122783. Bail reduced from 150,000 to 500. Charges dismissed at preliminary hearing. Prosecutor: Amos Stege (Chief DDA). Stege later intervened in Church's case on September 26, 2025 to file a "threat" notice based on a medical email.

The "Threats"

DA Merchant's April 2025 no-bail motion characterizes Church's 31 emails as "insulting, threatening." The emails are in the record as Exhibit 1. Their content: Brady v. Maryland citations, NRS 239.0107 references, Valdez-Jimenez v. Eighth Jud. Dist. Ct. citations, Eighth Amendment arguments, public records requests. One email alleges Church's phone — seized at arrest — contained exculpatory video that was subsequently destroyed (Brady violation). No response to this allegation appears in the record.

The Operation

From DA Merchant's own April 18, 2025 no-bail motion: *"law enforcement to include the federal US Marshall's Service, worked diligently to affect his capture with the use of a tracker on a vehicle associated with him and worked for weeks to pattern his movements. The first attempt to arrest him was unsuccessful, with the Defendant barricading himself in his house for days and refusing to come out. He was not captured willingly, but rather through a ruse that got him to eventually exit his home."* This describes resources deployed for a non-violent property dispute bench warrant.

The Competency Proceedings

- No medical evidence was presented at the December 5, 2024 Young hearing
- Referral basis (per subsequent evaluation report): Church was "uncooperative and abusive to counsel, staff, and everyone at the court"
- Both evaluators employed by NaphCare (private jail medical contractor)

- Evaluator 1 (Coyle, April 2025): incompetent, recommends inpatient treatment
- Evaluator 2 (Pinkerman, May 2025): competent, recommends proceeding; notes Church “expressed frustration about wanting to represent himself... and feeling as though the issue of competency was raised due to his desire to represent himself”
- No competency hearing has been held
- Case is stayed as of June 16, 2026

The Federal Case

Church v. Breslow et al., 3:24-cv-00579-ART-CSD, United States District Court for the District of Nevada. Named defendants include Judge Breslow and other officials. Claims: First, Sixth, and Fourteenth Amendment violations; 42 U.S.C. § 1983. DA Merchant, who continues to prosecute CR23-0657, is a named defendant. The state court has not addressed this conflict on the record.

3. System Architecture

Stack

Layer	Technology
Frontend	React 19, Vite, Tailwind CSS 4, shadcn/ui
Backend	Node.js, Express 4, tRPC 11
Database	MySQL/TiDB (via Drizzle ORM)
Auth	Manus OAuth (JWT session cookies)
File storage	S3-compatible (via <code>storagePut</code> / <code>storageGet</code> helpers)
LLM	Manus built-in (<code>invokeLLM</code> — server-side only)
Deployment	Manus Autoscale (serverless, Cloud Run)
Domain	therenorecord.manus.space

Key File Locations

<code>drizzle/schema.ts</code>	– All 34 database tables
<code>server/routers.ts</code>	– All 131 tRPC procedures (3,128 lines)
<code>server/db.ts</code>	– All database query helpers (1,998 lines)
<code>server/predicateAnalysisEngine.ts</code>	– Missing predicate analysis engine
<code>client/src/pages/</code>	– 35 frontend pages
<code>client/src/components/</code>	– Reusable UI components
<code>references/</code>	– Source notes, case facts, this brief

4. Database Schema (34 Tables)

Table	Purpose
users	Auth users; role: admin/user; subscriptionTier; stripeCustomerId
stories	Submitted community case stories; moderated
documents	Core archive: 50+ documents with AI classification, versioning, violation tags
timelineEvents	80+ chronological case events with source document links
actors	17+ named individuals; role, bio, agency affiliations
publicRecordsRequests	PRR tracking: filed, status, response, deadline
agentTasks	Background AI task queue
chatSessions	Docket Goblin chat sessions per user
chatMessages	Goblin chat message history
ingestJobs	Document ingestion pipeline queue
auditLog	Full audit trail for all admin actions
reviewRequests	Community document review requests
agencies	Named agencies (APD, DA's office, court, etc.)
violationTags	Violation signal taxonomy (15 types, 137 tags)
documentViolationTags	Many-to-many: documents ↔ violation tags
actorAgencyRoles	Actor ↔ agency role relationships
actorDocumentLinks	Actor ↔ document links
actorTimelineLinks	Actor ↔ timeline event links
userSubscriptionExtension	Stripe subscription state

Table	Purpose
contributorXp	Community contributor experience points
badgeDefinitions	Achievement badge definitions
contributorBadges	User ↔ badge assignments
creditLedger	Credit balance ledger
judicialCases	Comparable cases for judicial pattern analysis
boilerplatePhrases	Common judicial language patterns
auditRequests	Public audit request submissions
operatorProfile	Cameron's operator bio and project catalog
buildLogEntries	Operator build log entries
projects	Operator project catalog (Artificially Educated, Due Process AI, etc.)
filingPackages	Court filing package assembly
documentVersions	Full version history for every document
apiKeys	Public API key management
actorNewsCache	Actor news/misconduct cache (schema built, not yet populated)
predicateFindings	Missing predicate analysis results

5. tRPC API — All 131 Procedures

appRouter namespace map

```

Access levels

- `publicProcedure` — no auth required
- `protectedProcedure` — requires login (any user)
- `adminProcedure` — requires `role = 'admin'`

6. Frontend Pages (35 Pages)

Route	Page	Purpose
/	Home.tsx	Landing page — full narrative, 9 sections, live stats
/evidence	Evidence.tsx	Document archive — search, filter, classify
/evidence/:id	EvidenceDetail.tsx	Single document — full metadata, violations, versions
/timeline	Timeline.tsx	Chronological event list
/actors	Actors.tsx	Named actor directory
/actors/:slug	(via Actors)	Actor detail with dossier
/agencies	Agencies.tsx	Agency directory
/agencies/:slug	AgencyDetail.tsx	Agency detail
/accountability	Accountability.tsx	Violation tags by actor/category
/patterns	Patterns.tsx	Violation pattern analysis
/pattern	JudicialPattern.tsx	Judicial pattern audit (comparable cases)
/public-records	PublicRecords.tsx	PRR tracker
/search	Search.tsx	Global search
/case-report	CaseReport.tsx	AI-generated case summary
/case-intelligence	CaseIntelligence.tsx	Advanced case analysis
/church-record	ChurchRecord.tsx	Cameron's personal case record view
/missing-predicate	MissingPredicateReport.tsx	Missing predicate analysis report

Route	Page	Purpose
<code>/submit</code>	Submit.tsx	Community story submission
<code>/cases</code>	Cases.tsx	Community case browser
<code>/cases/:id</code>	(via Cases)	Individual case detail
<code>/election</code>	Election.tsx	Election accountability tracker
<code>/leaderboard</code>	Leaderboard.tsx	Contributor leaderboard
<code>/request-audit</code>	RequestAudit.tsx	Public audit request form
<code>/billing</code>	Billing.tsx	Subscription/credits
<code>/pricing</code>	Pricing.tsx	Pricing page
<code>/profile</code>	Profile.tsx	User profile
<code>/operator</code>	Operator.tsx	Cameron's operator profile
<code>/projects</code>	Projects.tsx	Operator project catalog
<code>/projects/:slug</code>	ProjectDetail.tsx	Individual project detail
<code>/admin</code>	Admin.tsx	Admin panel (documents, timeline, actors, PRRs)
<code>/admin/manage</code>	AdminManage.tsx	Advanced admin management
<code>/admin-hub</code>	AdminHub.tsx	Unified CRUD hub — all record types, batch tools
<code>/api-surface-map</code>	ApiSurfaceMap.tsx	Internal: unexposed procedures reference
<code>/preview-check</code>	PreviewCheck.tsx	Internal: preview/deployment health check
<code>/not-found</code>	NotFound.tsx	404

7. Core Systems

Docket Goblin

AI-powered document ingestion pipeline. Drop a PDF → extracts text → identifies dates, actors, case numbers → classifies by record type (state case / federal case / supporting / unfiled) → tags violations → creates timeline event draft → QC supervisor reviews → admin approves. Powered by `invokeLLM`. Includes a chat interface for document analysis.

Key procedures: `docketGoblin.ingest`, `docketGoblin.draftForDocument`, `docketGoblin.applyDraftToDocument`, `docketGoblin.send`

Evidence Engine

Document classification and versioning system. Every document has: `recordStatus` (`on_record_state` / `on_record_federal` / `supporting` / `unfiled_not_on_record` / `unclassified`), `reviewStatus` (`pending` / `approved` / `rejected`), `publicStatus` (boolean), `aiPolicy` (`no_ai_processing` / `ai_allowed`), full version history in `documentVersions`.

Key procedures: `evidenceEngine.batchClassify`, `evidenceEngine.reclassify`, `evidenceEngine.versions`, `evidenceEngine.restoreVersion`

Missing Predicate Report

Analyzes all timeline events against the document archive to identify court actions without locatable supporting predicates. Uses LLM batch analysis (10 events/batch). Classifies each event as: Located / Partial / Contradicted / Not Located / Off-Record / Needs Human Review. Generates severity scores (liberty impact / counsel authority / procedural disposition / administrative). Exports to CSV and print/PDF. Court-safe language enforced throughout.

Key procedures: `predicate.generateReport`, `predicate.getReport`, `predicate.getReportStats`

Violation Tag System

15 violation tag types, 137 total tags across 50+ documents. Tags include: Brady violations, Faretta violations, speedy trial, ineffective assistance, due process, judicial misconduct, prosecutorial misconduct, competency procedure violations, etc. Each tag has a source quote and citation.

Judicial Pattern Audit

Compares the Breslow/CR23-0657 docket against comparable cases in the same court. Tracks: trial held, continuances, counsel changes, Faretta handling, competency raised, discovery

issues, warrant use. Generates a comparative metrics report.

Public API

REST API with OpenAPI spec and MCP manifest. Queryable by external tools, AI agents, and attorneys. API key management via `apiKey.*` procedures.

Billing / Subscriptions

Stripe integration (test environment configured). Tiers: free, receipts, goblin_pro. Credit packs for Goblin usage. Billing portal via Stripe.

8. Admin Operations

Admin Hub (`/admin-hub`)

Unified CRUD for all record types. Tabs: Documents, Timeline, Actors, PRRs, Agencies. Inline edit, soft/hard delete, reclassify per document, Goblin history per document, batch classify, actor-document link manager, agency actor roles.

Admin Panel (`/admin`)

Full document management: upload, approve/reject, violation tag assignment, version history, inline edit.

AdminManage (`/admin/manage`)

Advanced: ingest job queue, review requests, audit log, user management, story moderation.

9. Key Constraints and Operational Notes

What must never happen

- Do not generate legal conclusions. All findings must be framed as record-integrity observations: “Reviewed record does not locate...”, “Predicate not found in reviewed materials...”
- Do not fabricate, seed, or mock case facts, violation tags, or document content
- Do not store file bytes in the database — use S3 via `storagePut`
- Do not call LLM from frontend — server-side only via `invokeLLM`

- Do not hardcode port numbers in server code

Court-safe language requirements

Every AI-generated output in this system must use court-safe framing:

- “The reviewed record does not locate a supporting predicate for...”
- “Predicate not found in reviewed materials...”
- “Supporting authority appears partial...”
- “The record should identify...”
- Never: “proves,” “demonstrates,” “shows misconduct,” “illegal,” “criminal”

Document classification logic

- `on_record_state` — filed in CR23-0657 state court
- `on_record_federal` — filed in 3:24-cv-00579 federal court
- `supporting` — supporting/reference documents (not filed)
- `unfiled_not_on_record` — exists but not in the official record
- `unclassified` — pending Goblin classification (26 documents as of last count)

Access control

- Public: browse documents, timeline, actors, patterns, search, case report, predicate report (read-only)
 - Authenticated user: submit stories, file PRRs, use Goblin (free tier), request audits
 - Admin: all CRUD, Goblin ingest, batch classify, violation tag management, user management, predicate report generation
-

10. Strategic Context

Why this system exists

Cameron Church built this system because:

1. Five attorneys cycled through his case without filing a single substantive motion
2. Every pro se filing he submitted was struck with a rubber stamp (“DFX: DEFENDANT REPRESENTED BY COUNSEL”)

3. A competency evaluation was ordered — based on the quality of his legal arguments, not medical evidence — effectively silencing him
4. The case has been pending for 1,216+ days with no trial
5. A federal civil rights lawsuit naming the judge and prosecutor is pending, and the state court has not addressed this conflict

The archive is his primary mechanism for: (a) preserving the record, (b) creating public accountability, © supporting the federal case, and (d) demonstrating that his pro se legal work is substantive, cited, and coherent — directly contradicting the competency referral basis.

What makes this legally significant

- The DA's own motion describes the defense theory as a "rent dispute" — corroborating the defense
- The DA's own exhibit (31 emails) shows legal arguments, not threats
- Both competency evaluators work for the same private contractor and reached opposite conclusions
- The second evaluator's report explicitly links the competency referral to Church's desire to represent himself
- A recorded call confirms law enforcement knew Church's location 55 days before the arrest
- The prosecutor is a named defendant in a pending federal civil rights case
- The judge is a named defendant in the same federal case
- The case is now stayed and a disqualification question has been referred

What this system is not

- It is not a legal filing system (documents are archived, not e-filed)
 - It is not a case management system for attorneys
 - It is not a news publication (no editorial opinion — only record-sourced observations)
 - It is not a threat or harassment tool (all content is sourced to public records)
-

11. Open Work (as of July 9, 2026)

Item	Priority	Notes
Operator bio/project pages	Medium	Content-blocked on Cameron's input
Actor misconduct profiles (v7.6)	High	Schema built (<code>actorNewsCache</code>), procedures built (<code>actor.news</code> , <code>actor.refreshNews</code>), no UI yet
26 undated documents	High	Use <code>evidenceEngine.batchClassify</code> from Admin Hub
Version history UI on Evidence Detail	Low	Backend exists, no frontend
Scheduled autonomous ingest	Low	Requires persistent infra (not serverless)
Telegram bot	Low	Separate persistent infra decision

12. Source Documents in the Archive

All source documents are in `/home/ubuntu/upload/` in the sandbox. Key documents:

File	What it is
07-07-26CaseSummary.pdf	Full docket as of July 7, 2026 — most authoritative timeline source
Dec5thTranscript.pdf	Transcript of December 5, 2024 Young hearing
04-18-25motionfornobail.pdf	DA's no-bail motion — contains “rent dispute” quote and operation description
02-21-25callwillusmarshals.pdf	Recorded US Marshal call — confirms location known Feb 21
FIGUEROAEMAILSTHROUGH08-21-25.pdf	Full Figueroa email chain
sambarcomplaint08-12-25.pdf	Bar complaint against Figueroa

File	What it is
	Cameron's pro se letters

13. How to Operate This System

Adding a new document

1. Go to `/admin-hub` → Documents tab → Upload
2. Or use Docket Goblin: drop PDF → `docketGoblin.ingest` → review draft → `docketGoblin.approveIngest`
3. Assign violation tags via Admin Hub or Admin panel
4. Link to timeline events via `actorLink.addDocumentLink` or Admin Hub

Running the Missing Predicate Report

1. Log in as admin → `/missing-predicate` → click “Generate Report”
2. LLM analyzes all timeline events in batches of 10
3. Results appear in the table with severity scores and recommended requests
4. Export to CSV or print for court use

Adding a timeline event

1. `/admin-hub` → Timeline tab → “Add Event”
2. Or via `timeline.adminCreate` procedure
3. Link source documents via `sourceDocuments` field (JSON array of document IDs)

Promoting a user to admin

Execute SQL: `UPDATE users SET role = 'admin' WHERE email = 'user@example.com';`

Checking for undated documents

`/admin-hub` → Documents tab → filter by `recordStatus = 'unclassified'` → use Batch Classify

This brief was generated July 9, 2026. All facts are sourced to documents in the archive or the /home/ubuntu/upload/ directory. For the most current docket, consult 07-07-26CaseSummary.pdf.
